

National Conference
On
Recent Advances in Statistical and Mathematical Sciences and their
Applications (RASMSA-2014)

Organized by

Department of Statistics, Kumaun University,
S.S.J.Campus, Almora, Uttarakhand, India

Statistics plays an essential role in contributing to the development of various fields such as computer sciences, medical sciences, engineering, economics, business, informatics, agriculture as well as catalyst for human capital developments. Researchers of various fields are realizing the importance of using statistical techniques to interpret the results for their experiments. So, there is a need to provide a platform for leading academic scientists, researchers, and students to exchange ideas, communicate and discuss new results and advances in statistics and its applications in other fields. This conference will provide opportunities to leading academic scientists, researchers and students to discuss recent developments in statistics and its connection to the other fields such as mathematics, and computer sciences. This conference also aims to strengthen the relationships among the researchers of statistics, mathematics and computer sciences by exchanging and sharing their experiences and research results. Delegates will get the opportunities to learn new methodologies in these areas through sessions with paper, panels, and poster presentations. The conference also provides opportunities for the audience through various academic sessions, and invited talks on effective communication, management and leadership skills to further their career development. The main objectives of this conference are

- To attract world class scientist for sharing their knowledge and expertise.
- To serve as a platform to researchers for sharing their research findings in statistics, mathematics and computer science.
- To provide opportunities to research scholars for discussing new results and advances in the aforementioned areas.
- To popularize the use of statistical software like R and SAS.
